

Hope Artificial Intelligence

Scenario Based Learning

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

A) How will you achieve this in AI?

Answer: We are going to predict the Employee will resign or not . The call to action will be to understand whether the company needs to make any decision or not.

B) Find out the 3 -Stage of Problem Identification

Answer:

1. Domain -> Machine Learning because The input is mostly in numbers

2. Learning -> Supervised Learning == Because the requirements are clear and we know the Input and Output from the previous data,

3. Supervised - Classification -> The output is not continuos and we are also categorizing the label as either Resign or Not Resign,

C) Name the project

Answer: Employee Resignation Prediction

D) Create the dummy Dataset.

Dummy Data:

Employee Id	Age	Last Salary Hike	Recently Upskilled	Resigned
E1	20	Never	yes	Not Resigned
E2	45	3 year ago	yes	Resigned
E3	42	2 years ago	yes	Resigned
E4	50	1 month ago	No	Not Resigned
E5	36	1 year ago	yes	Not Resigned
